The Consumer Price Index (CPI) is produced on a monthly basis by Statistics Canada. The data used to determine the CPI are collected by survey and the results are released in Statistics Canada catalogue ***The Consumer Price Index***, catalogue no. 62-001. The Index is used to determine price change (inflation) in a given city or province over time. In order to calculate the inflation rate in an area, an index for two time periods is required. The percentage change in this index from one point in time to the next is known as the 'rate of inflation' (or 'rate of deflation' if there is a decrease).

The current official time base of the Consumer Price Index (CPI) is 1992 = 100.
